wins
1998 LISA Award
for its
Environmental Detection
Systems Software

RAM™ 2000
Remote Air Monitor

5098-233

Capping a long history of producing high quality software, AIL Systems Inc. was recently awarded the 1998 Long Island Software Award (LISA) in the large company category for AIL's Remote Air Monitor (RAM 2000™) Program. **The RAM 2000™ is a Windows™ based chemical detection and quantification system used to monitor petrochemical facilities.** The program features advanced signal processing algorithms, control of multiple system hardware components and an easy to use GUI interface. The program is extremely fault-tolerant providing a 24-hour a day, seven-day a week operation to its users.

State-of-the-practice software tools and methods and an SEI compliant development process results in record breaking productivity and quality metrics. AIL also designs and manufactures gamma radiation detection systems (GammaCam™), as well as military receiver and countermeasures systems, multiplatform radars, satellite communication components and antennas.

The LISA Award is presented by The Long Island Software and Technology Network (LISTnet). LISTnet is a not-for-profit organization of over 330 members dedicated to promoting the software industry on Long Island.

This award winning software product is now available to client companies.
